About the Raincap Head Harness

The Raincap style football helmet refers to soft leather, canvas, or moleskin helmets with rounded crowns that could be folded in half easily. Countless variations of the raincap were sold over a 30 year period from 1898 - 1928. Raincaps typically possess independent ear flaps sewn onto the body of the harness, which is padded with cotton or wool. Raincap-styles are separated into two periods. First generation raincaps lacked a rear neck protector, and were generally produced before 1906. Second generation raincaps include the rear neck protector and were produced after 1905.

Distiniguishing Characteristics

Soft Leather, Canvas, or
Moleskin Body

Cotton or Wool Padded
Interior

Independent Ear
Flaps Sewn to Body
